

# WATER SAFETY PLANS

Safe drinking water is vital for the health and wellbeing of all. However, providing safe drinking water can be a complex challenge. The FAIRWAY team strives to stimulate the improvement of drinking water safety across the European Union by sharing context, best practices and lessons learned on Water Safety Planning for both small and large water supplies.

## WATER SAFETY PLANNING

The systematic approach to ensure water safety, covering all stages of water supply production and distribution from catchment to consumer.

## STAKEHOLDER INVOLVEMENT

The FAIRWAY case studies shared information on experiences with Water Safety Planning

## KEY MESSAGE 1

Establishing cooperation between large and small supplies contributes to overcoming barriers for effective risk assessment and management for small suppliers

## KEY MESSAGE 2

Effective Water Safety Planning requires a process owner to bring together institutions and stakeholders, spread information throughout organizations and provide congruence between different risk assessment and management systems
